Environmental Policy

Nulife Glass Processing Limited was established with the sole aim of developing a process to safely recover the toxic lead from waste cathode ray tube (CRT) glass thereby solving one of the world's most pressing waste recycling issues. From the outset the process was designed to have a low environmental impact and be as efficient in its use of resources as possible.

All industrial processes have an impact on the environment and although the recycling of a hazardous waste has significant environmental benefits we are committed to preventing pollution in all areas of our business.

In order to achieve even higher levels of environmental performance we are committed to a process of continual improvement which is achieved by setting environmental objectives and targets which are reviewed and updated on a regular basis.

Due to the nature of our business we are required to operate within a strict legal framework and we are committed to complying with all applicable legal and other requirements relating to the environmental aspects & impacts of our operation.

In order to achieve the commitments above we have implemented an environmental management system which complies with the requirements of ISO14001:2004.
